The Agile Environment

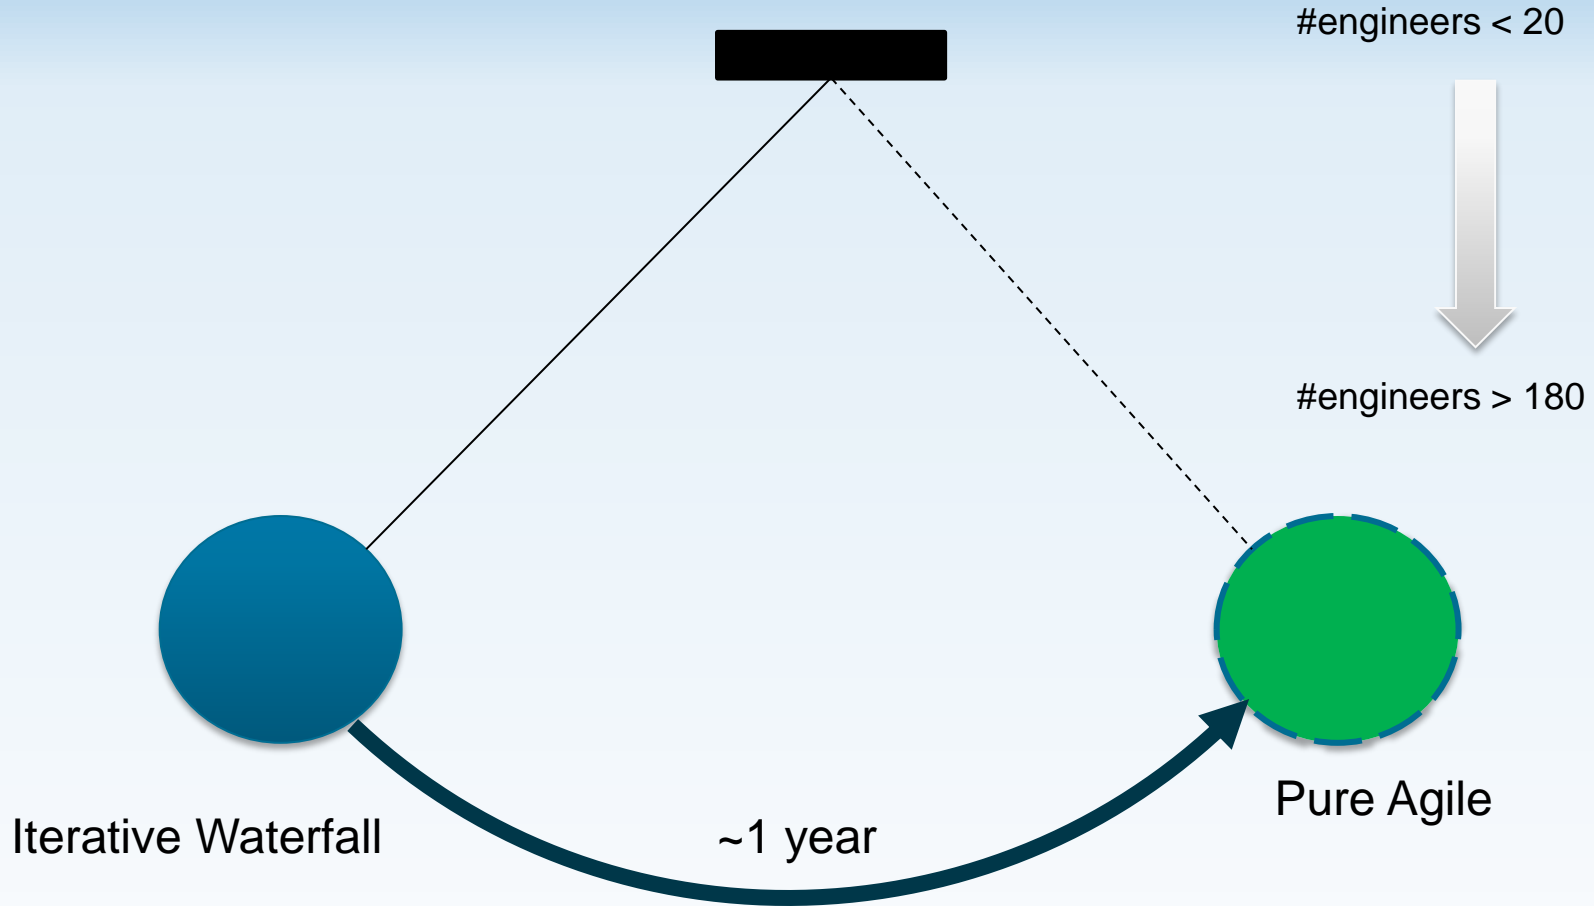

John Deere – Display Development

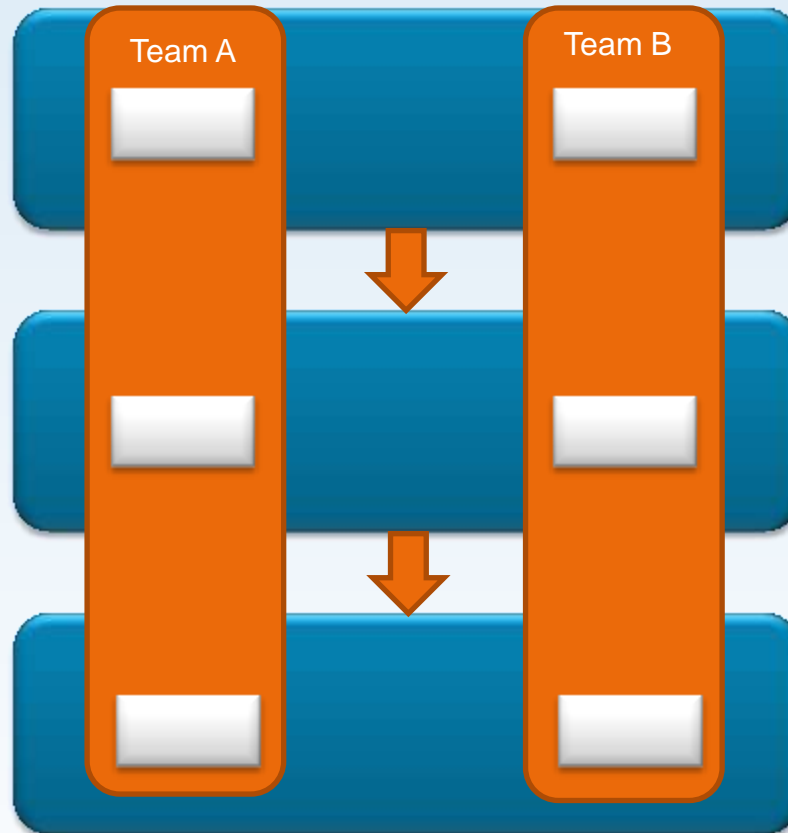

Starting Point

Large-Scale Transition Towards Agile

Vertical Slices

Observations*

Clear phases are gone

Specs -> user stories

Rules & standards?

* „Agile doesn't scale ... without architecture“ SATURN 2012
<http://www.sei.cmu.edu/library/abstracts/presentations/keuler-saturn2012.cfm>

Resulting Mind Sets ...

... next PSI ?!

... we don't document

„Do what you want“

... YAGNI

... Agile as an “excuse”

Root Cause: Philosophy Issues

Agile $\subset \sum$ Agile Techniques

Agile \neq {Programming} \ {Plan}

Architecture Awareness

...

Haven't seen any

How did we know?

“Who is responsible for this component?”

“Who is impacted if I want to make a change, and who needs to review the change?”

“Oh ... didn't know we had that service implemented already”

...

The Challenges: How ...

- “... do the developers know about architectural structures?”
- “... can developers to stay focused on writing code?”
- “... do we deal with the fact that developers are feature- and code-centric?”

**What was our
Approach?**

...

*Connecting Architecture
and Implementation*

Code-centric Architecture

Unified Component Communication

Glue code generation

Common Technical Framework

Architecture
Description

**Transformation
Chain (Acceleo)**

Generated
Glue Code

Manual
C++ Code

Architecture Description

```

<systemManifest name="mySystem"/>
  <component name="ui" typedef="ui.xml"/>
  <component name="logic" typedef="logic.xml"/>
  <component name="data" typedef="data.xml"/>
</systemManifest>

```

```

<componentType name="logic">

```

```

  <name="computeData"/>

```

```

  <reply>

```

```

    <parameter name="data"/></parameter>

```

```

  </reply>

```

```

  </request>

```

```

  <state name="ready" type="bool"/>

```

```

  <event name="dataProcessed"/>

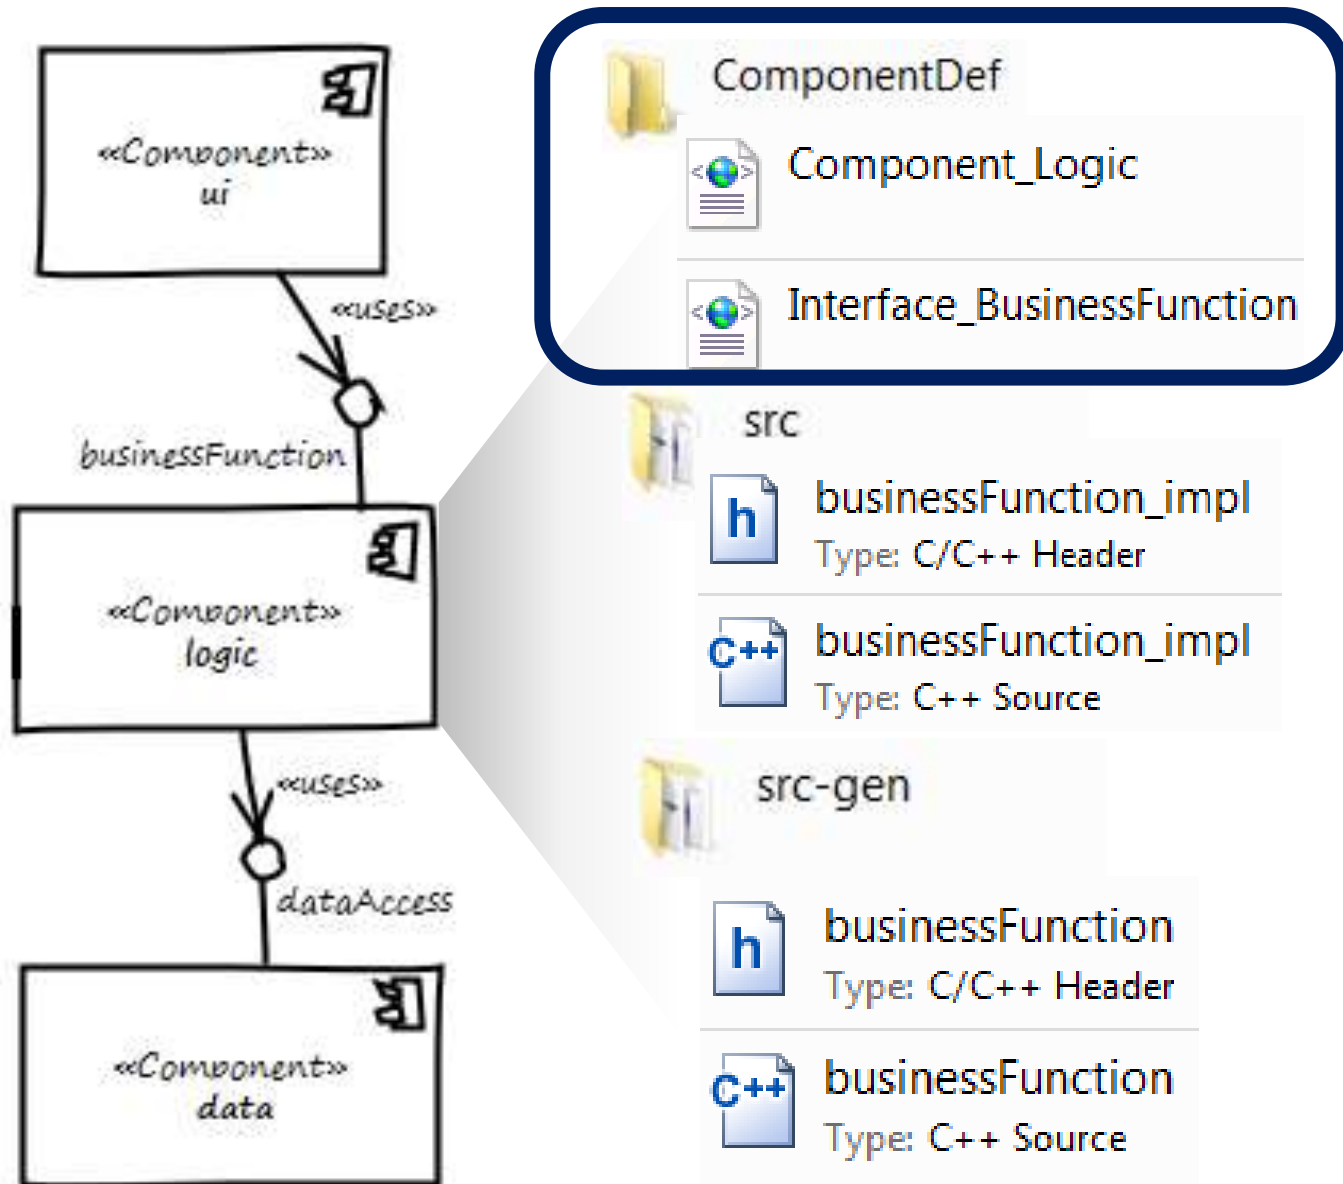

```

```

</interfaceManifest>

```

Co-Location of Architecture and Code

Experiences

Developers ...

... need guidance
... embrace encapsulation of architectural decisions

Architecture ...

... visible by co-location with implementation

Modeling tool not accepted

XML-based notation

“On-demand” generation of component structures

... convincing factor for Developers

Thank you for your attention!
