

Automated Reliability Prediction from Formal Architectural Descriptions

João M. Franco, Raul Barbosa and Mário Zenha-Rela
{jmfranco,rbarbosa,mzrela} [at] dei.uc.pt
University of Coimbra, Portugal

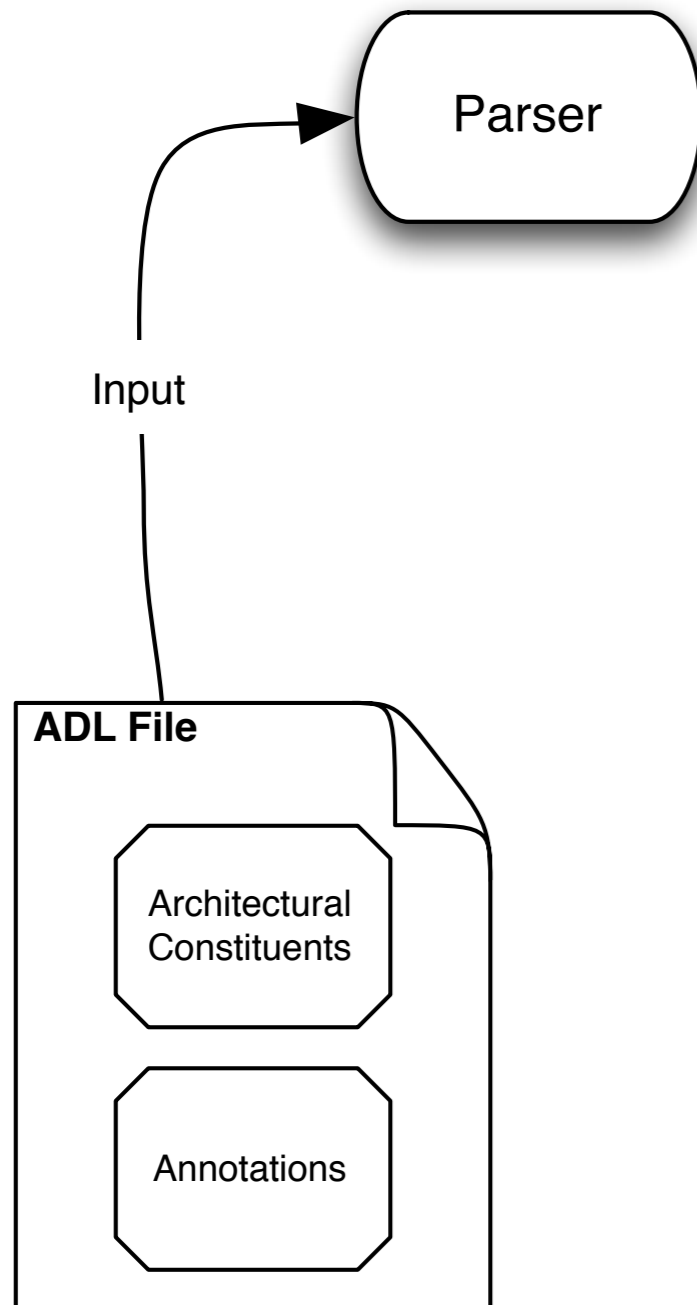

Introduction

- SwA supports the specification of quality attributes
- Early architectural decisions
 - Influence software quality
 - Prevent additional costs
 - Assure architects on stakeholder requirements
- **Problem** - In current practice, very few software quality attributes are automatically checked

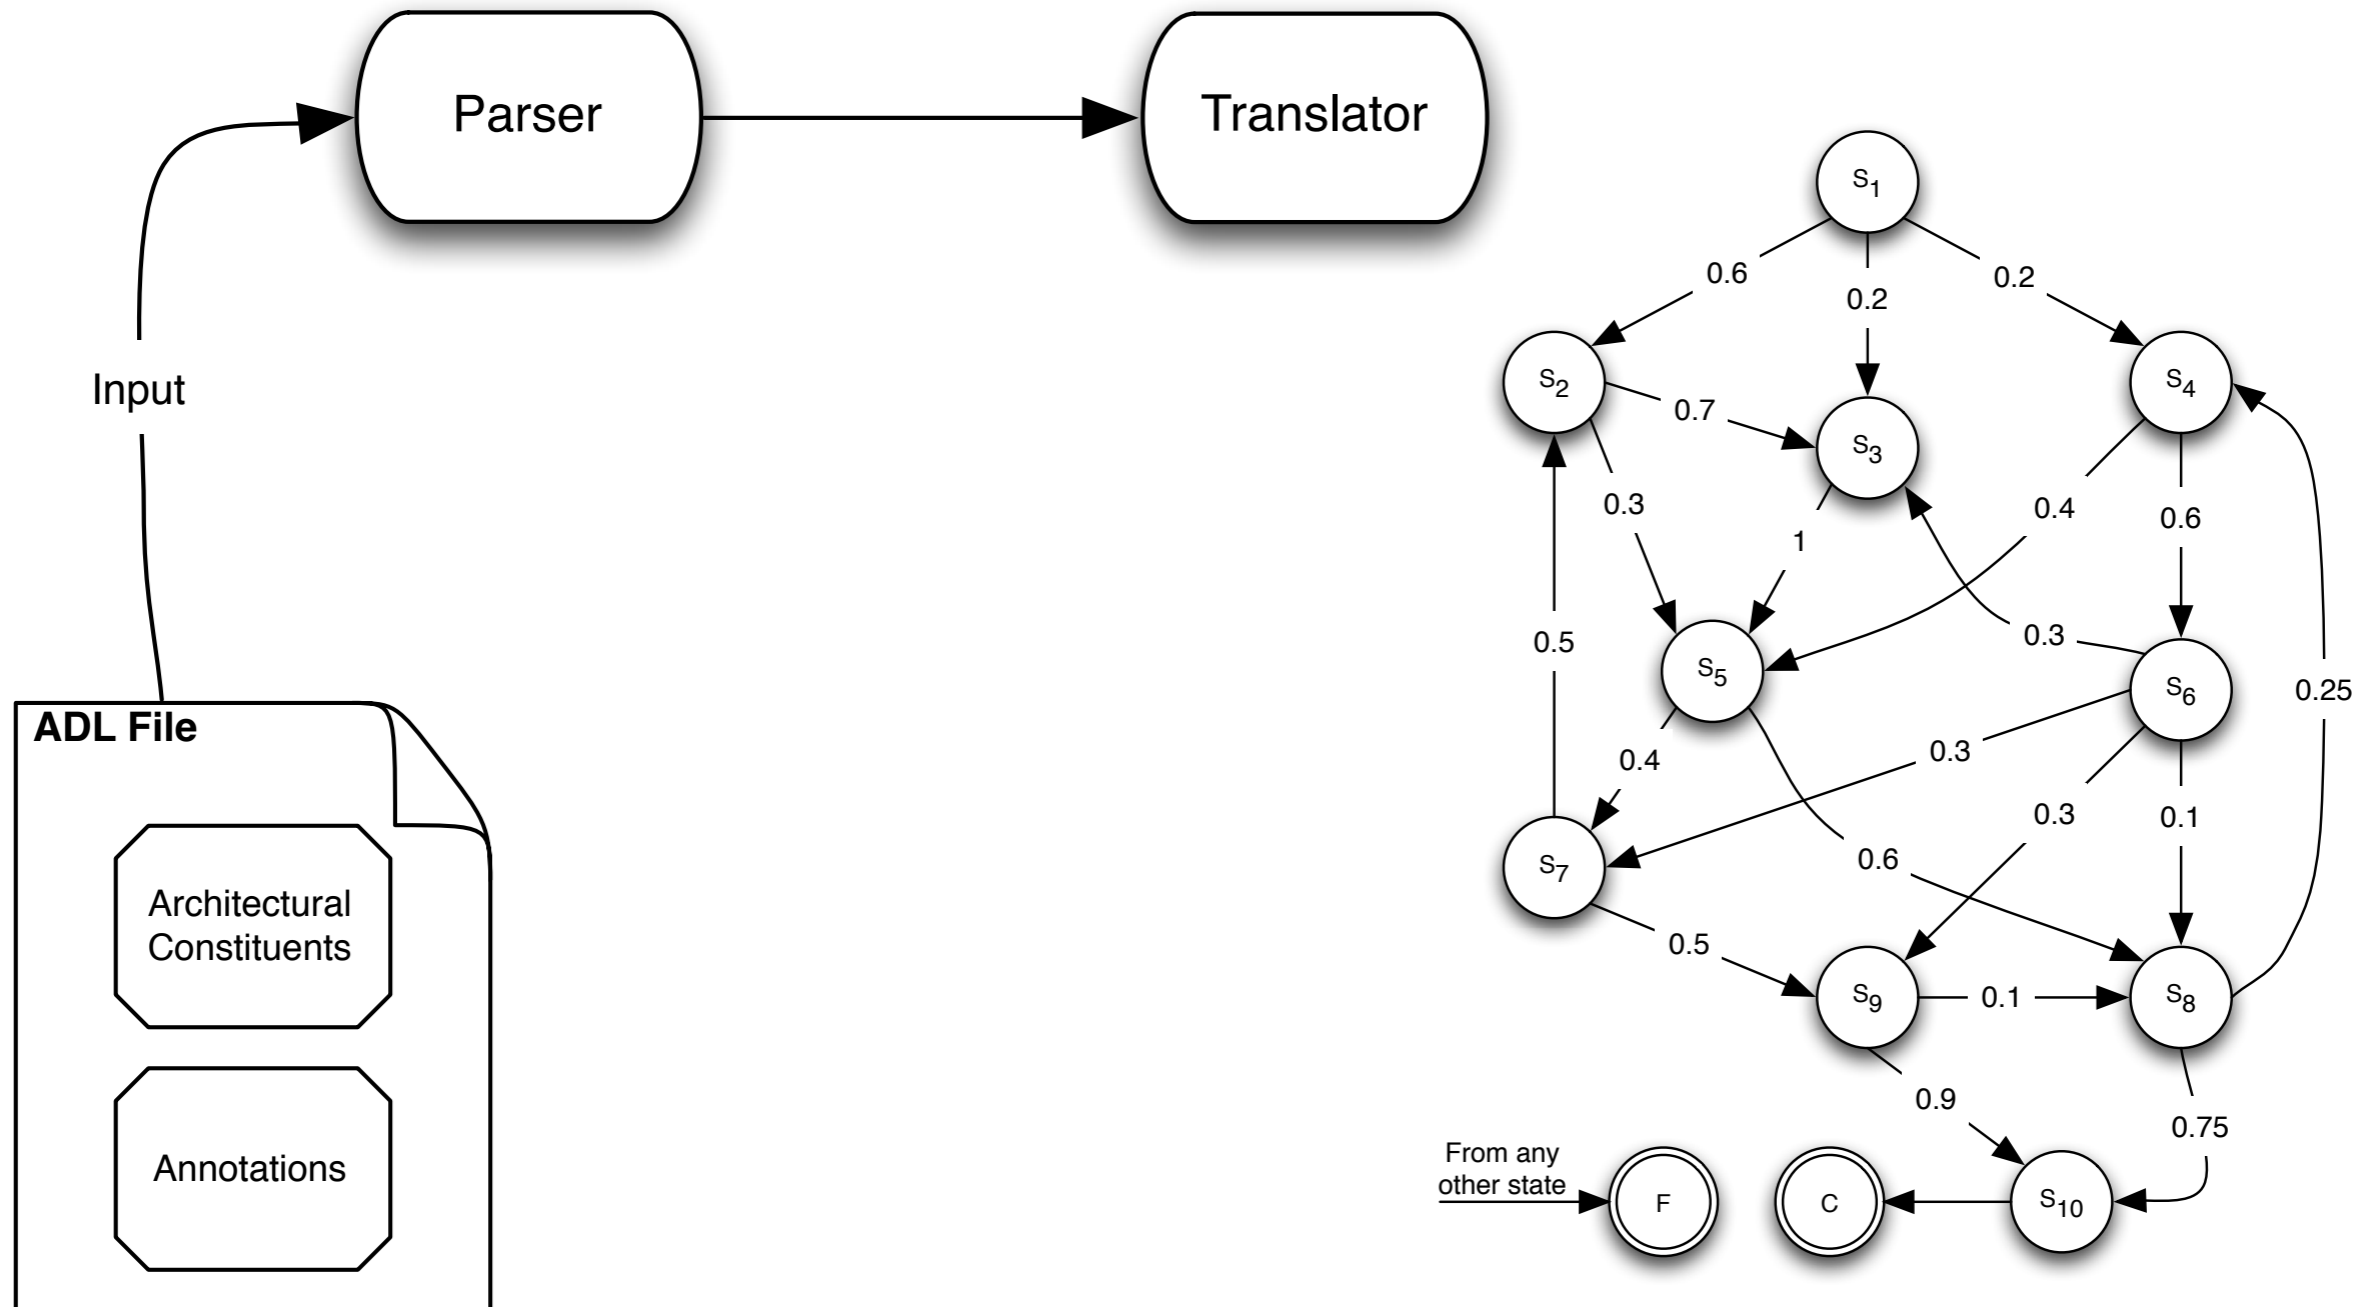

Architectural Description $\xrightarrow{\text{To}}$ Reliability Prediction

Architectural Description $\xrightarrow{\text{To}}$ **Reliability Prediction**

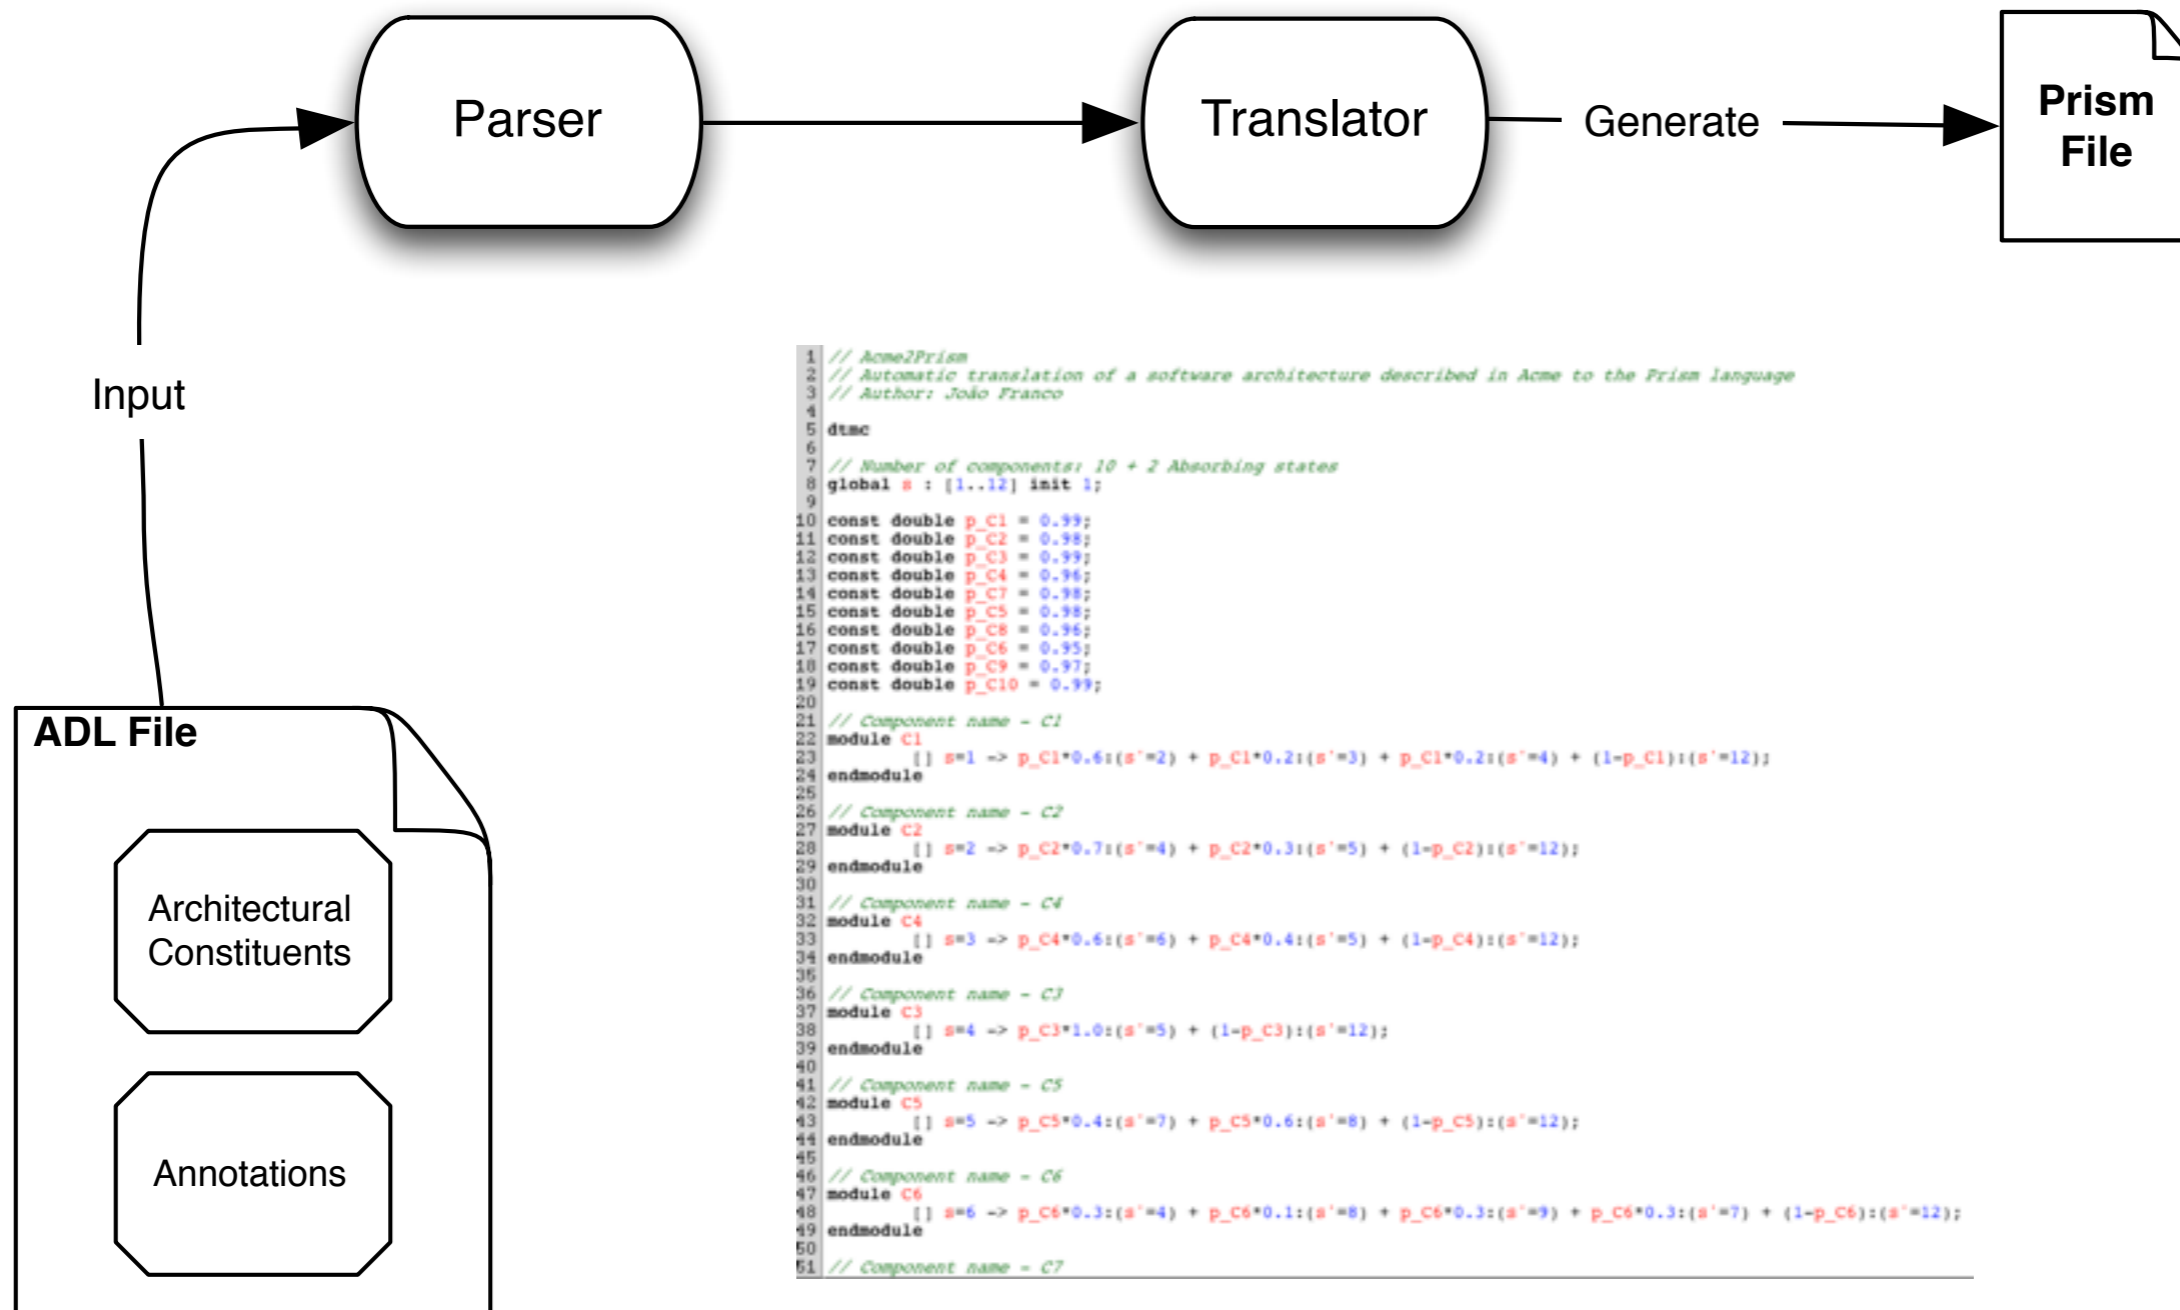

Architectural Description $\xrightarrow{\text{To}}$ Reliability Prediction

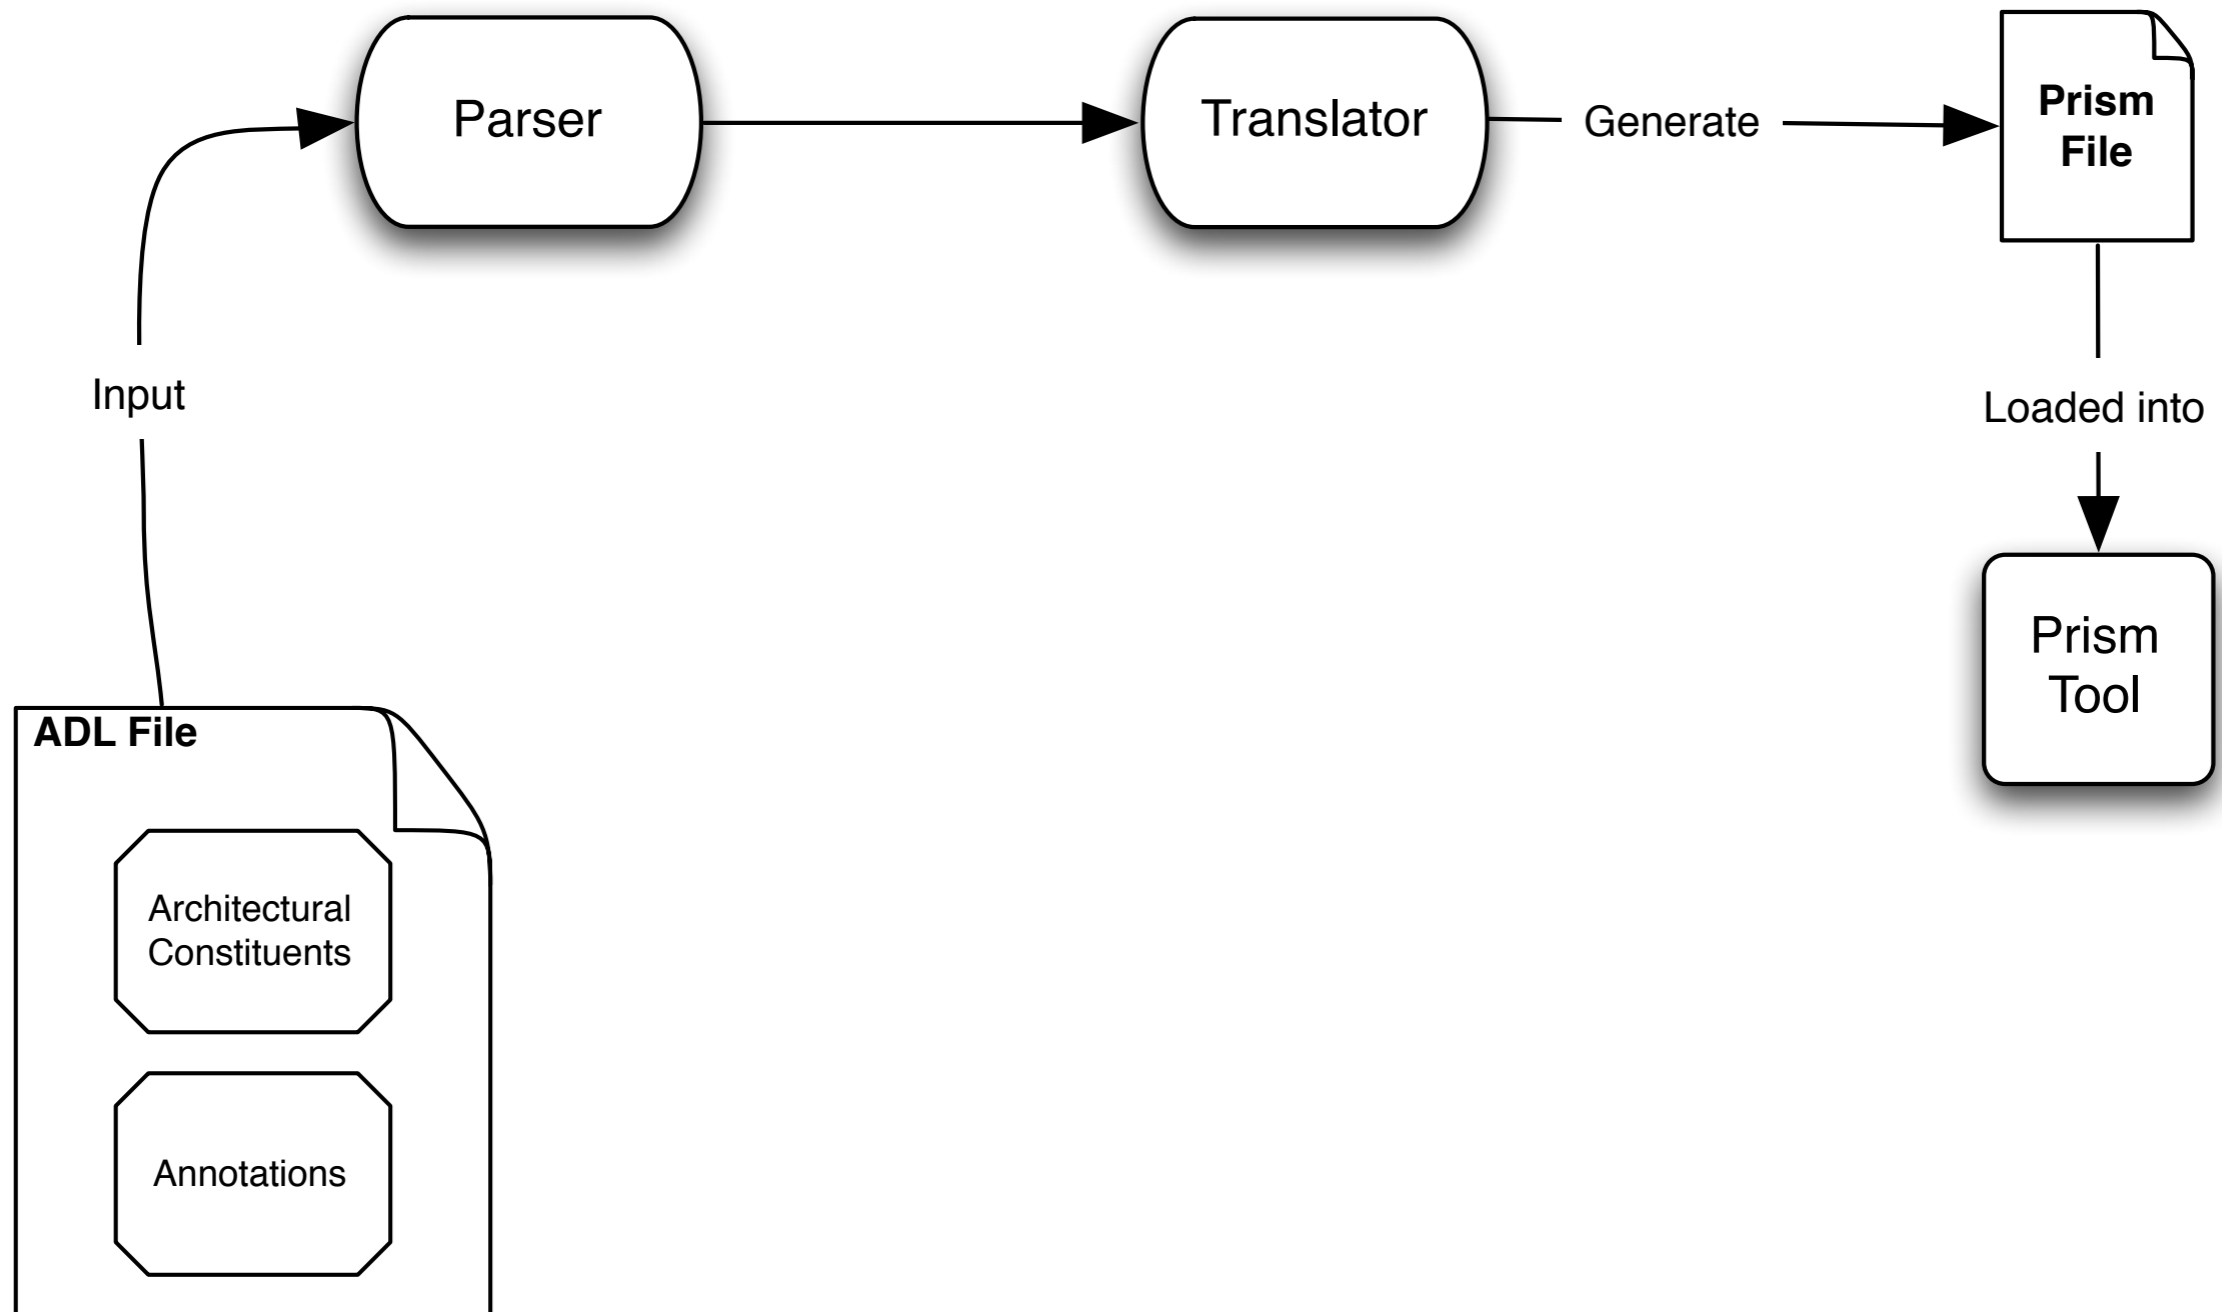

Architectural Description → Reliability Prediction

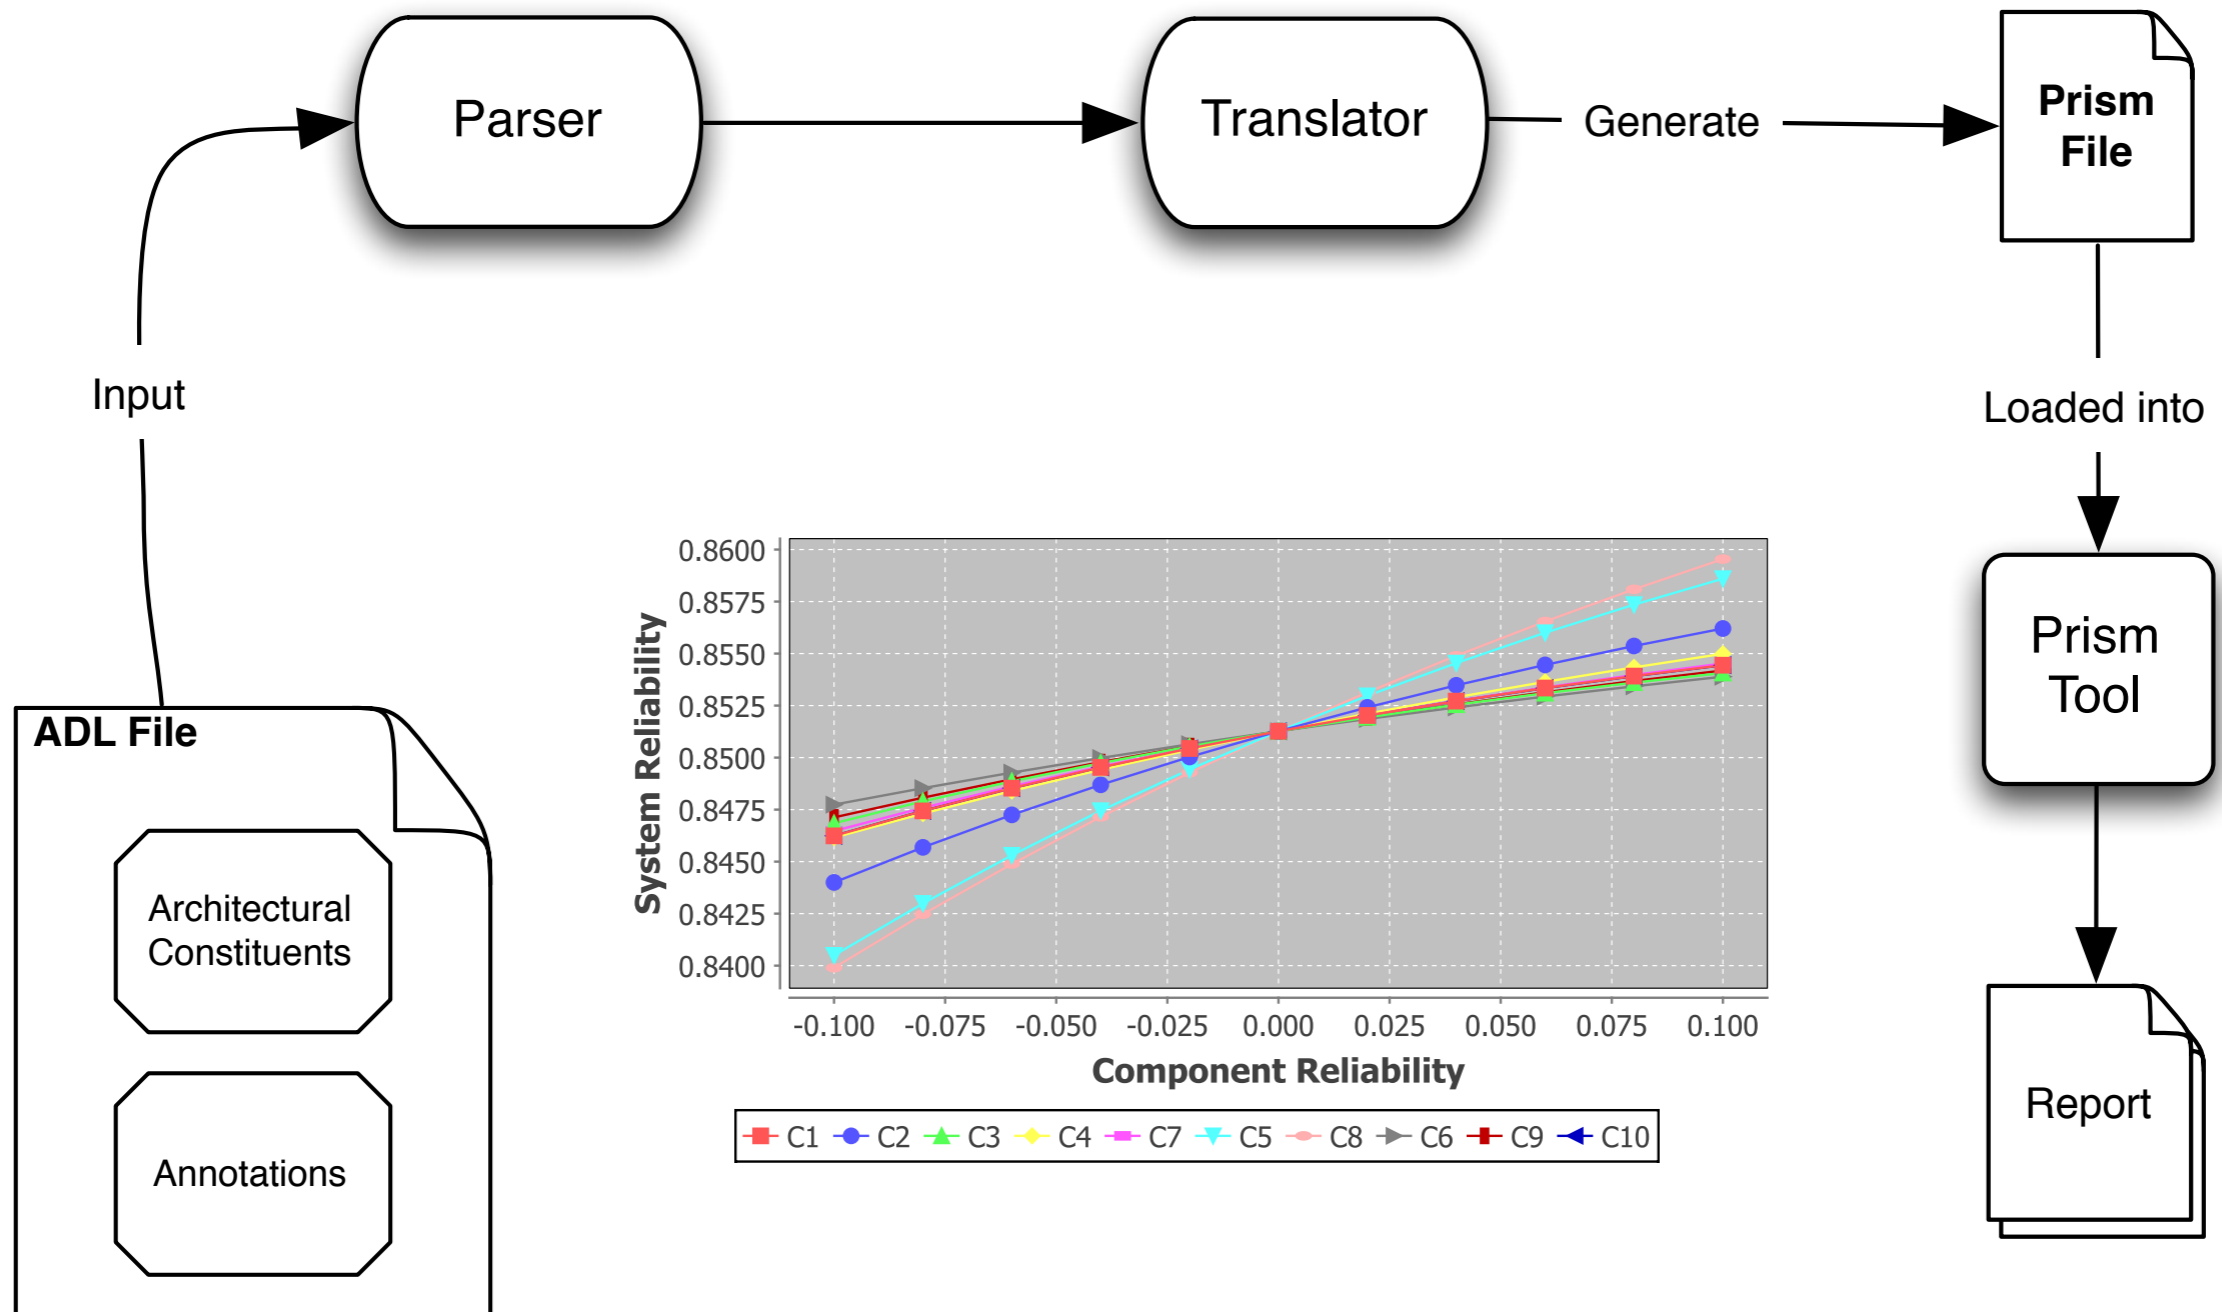

To

Architectural Description → To → Reliability Prediction

Architectural Description $\xrightarrow{\text{To}}$ Reliability Prediction

Validation

Reliability Prediction

		Literature	Our Approach	Difference
Gokhale 2002	Composite	0.8299	0.8299	0.00%
	Hierarchical	0.8280		0.22%
Lo et al. 2005		0.8482	0.8512	0.35%

Architectural Styles

Style	Wang et al. 2006	Our approach	
		Reliability	Diff.
Batch-sequential	0.9248722	0.9248722	0.0%
Parallel	0.8945088	0.8945088	0.0%
Fault-tolerance	0.9503923	0.9503923	0.0%
Call-and-return	0.9317644	0.9317631	~ 0.0%

What to Remember?

- Automated stochastic model generation
- Integration with different arch. styles
- Validation with $< 1\%$ diff.
